Read GPS Log From Device

Step 1 – Connect Data Logger to PC USB port. Please make sure the Data Logger power is turn on.

Step 2 – Menu command "File" -> "Read log…" Users have to input product key at the first time. The product key is on the cover of installation CD.

GPS Photo Tagger will automatically detect the port and baud rate and read in the GPS tracks.
A track list window will be popped up. Select the tracks to import.

Track Name	Start Time	End Time	Total Distance
☑ holux2008/07/31_10:46	7/31/2008 10:46:36 AM	7/31/2008 2:24:41 PM	50.8 km
☑ holux2008/07/31_15:31	7/31/2008 3:31:50 PM	7/31/2008 5:10:26 PM	6.9 km
☑ holux2008/08/01_12:12	8/1/2008 12:12:54 PM	8/1/2008 12:25:08 PM	3.4 km
☑ holux2008/08/07_10:34	8/7/2008 10:34:23 AM	8/7/2008 11:34:15 AM	1.5 km

Select Track

Please select tracks to add to current project:

OK   Cancel

Tracks will be shown on the Google Map window.
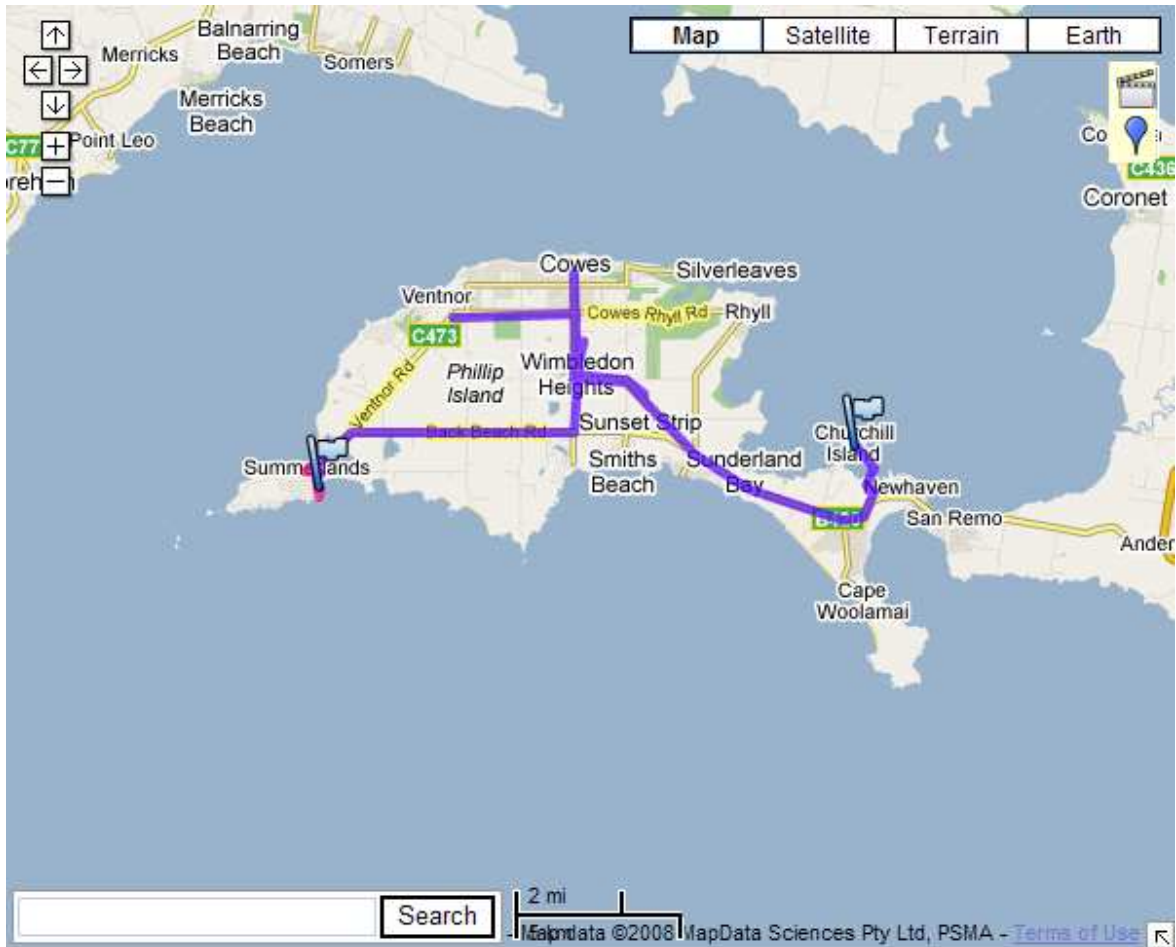

POI button

If your logger has POI button, you can press the POI button to mark the point. When the POI button is pressed while logging, a POI icon will appear on the track through the ezTour utility. Press the POI icon on the ezTour to edit the name of the track, and add notes.
Clear Data Logger Memory

Menu command "File" -> "Clear Device log" will clear the data stored in device, so the device memory are enough for next usage.

Data Logger Configuration

Connect Data Logger to PC. Menu command "File" -> "Config GPS…" If Data Logger is not connected, the GPS Log Setting area will be disabled. Please make sure the Data Logger power switch is turn on when connect.

Connection Setting:

> Auto Scan GPS Module (Recommended)
>
> The program will automatically detect the com port and the baud rate. It is
> recommended to set to auto scan.

Manual Setting

> Users can also manually set the port and baud rate. Although it can speed up the
> initial connect time, but it is not recommended unless users understand the valid
> port and baud rate.

GPS Log Setting

> There are 4 log modes: General mode, vehicle mode, cycling mode, and hiking
> mode. Users can also change the default setting of these 4 modes.
>
> Log every () seconds:

Specify the log period. For example, if specify 3 seconds, the GPS device will log every 3 seconds.

Log every () meters:

Specify the log distance. For example, if specify 10 meters, the GPS device will log every 10 meters.

Data Log Memory

A bar show how many percentage of memory is used in the Data Logger device.

Users can use "Clear Log" to clear all the memory.

When data logger memory is full

Overwrite: Overwrite the earliest logged data.

Stop Log: Stop data logging.

Track List Window

Tracks are list on the top. Users can change the colors and line widths of tracks.

Press "Play" button, Google map window will animate the whole trip by moving the current position.

Check "Photo Slide Show" will show photo while animate trips.

Add Place Mark

To add a new place mark, please click on the blue balloon icon, and then click on the position of new place marker. The "Place Mark Property" dialog will be pop up for editing.

Users can manually add photos to the place mark, or delete photos from the place mark.
Add Photos

Users can add photo from a file folder, or selected files.

Add photo from a folder: Menu command "Photo" -> "Add Photo…" -> "From Folder". Select a folder to add photo.

Add photo from selected files: Menu command "Photo" -> "Add Photo…" -> "From Files". Use Ctrl-Click, or Shift-Click to select multiple files.

The photo will show on the Photo View window. Users can add comments to each photo. Users can also rotate, delete photo.

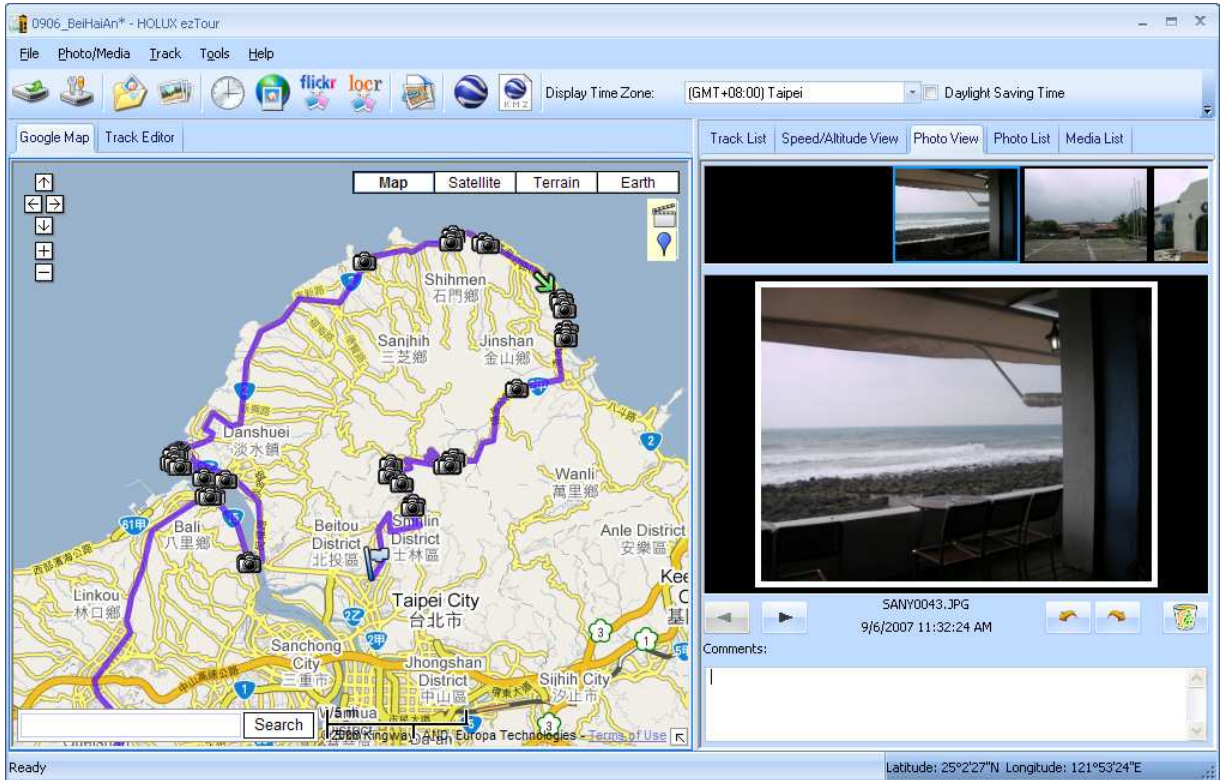

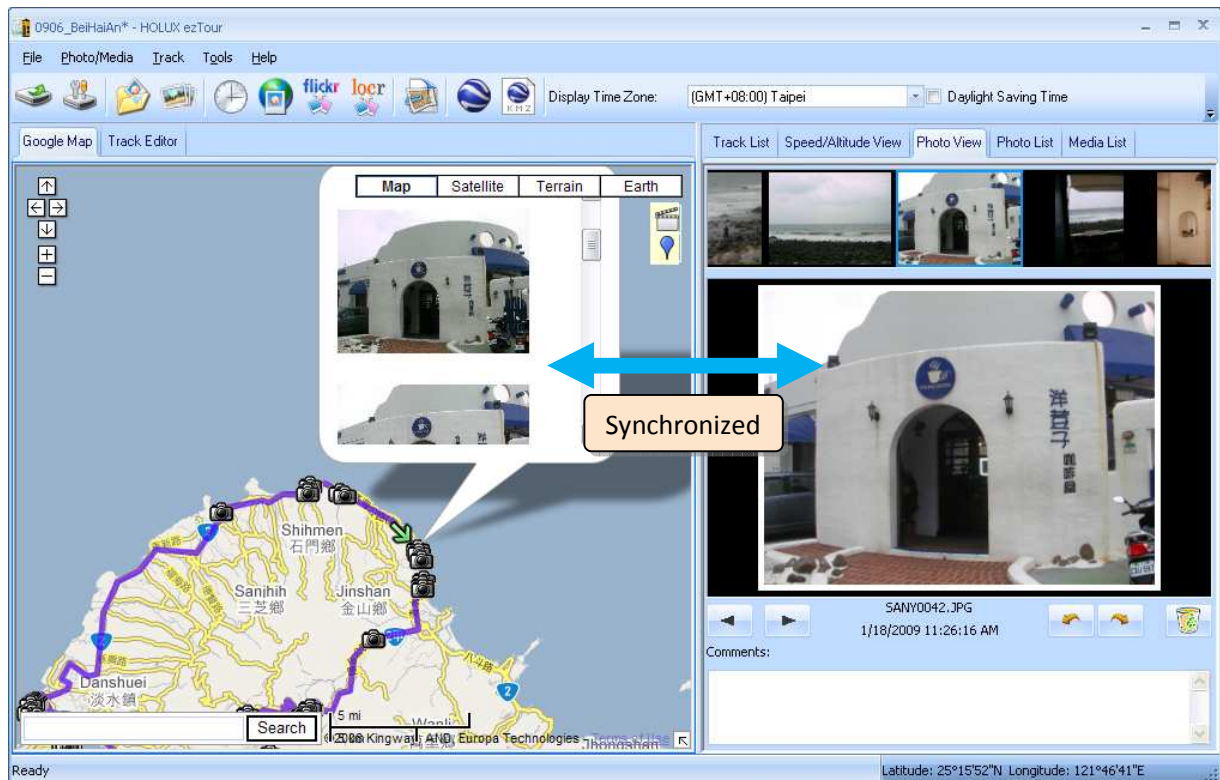

When photos are added, GPS Photo Tagger will automatically match photo and GPS logged waypoints by time. Place marks will be created as a placeholder for photos.

Browse photos

Click on the "next photo" and "prev photo" buttons to browse the photos. Current photo and current place mark will be synchronized.

GeoTag – Save GPS Information into Photos

Menu command "Photo" -> "Write GPS info into photos" will save the latitude, longitude, and altitude into photo.
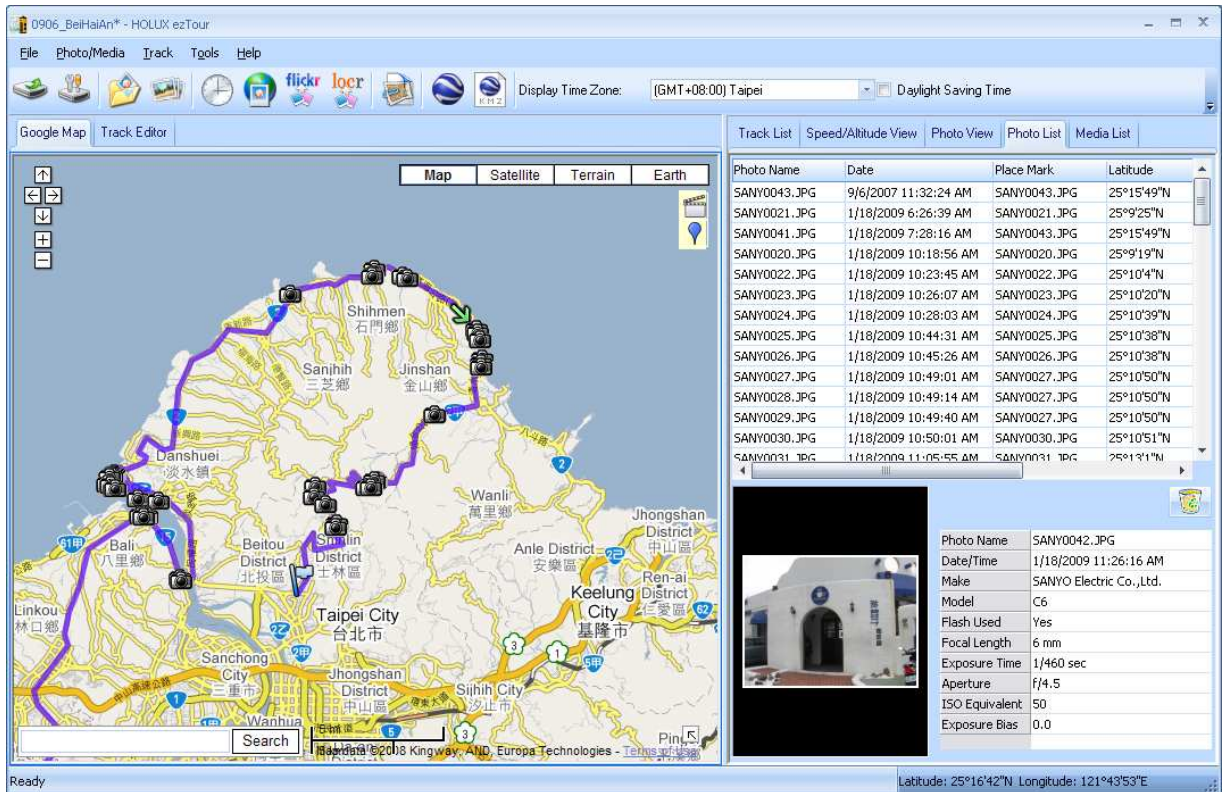

A progress window will show the writing progress.

Photo List Window

☑ Track Name	Start Time	End Time	Total Distance
☑ Track0906_0157	9/6/2007 9:57:41 AM	9/6/2007 1:10:23 PM	58.2 km
☑ Track0906_0157-2	9/6/2007 1:10:28 PM	9/6/2007 4:51:36 PM	68.8 km
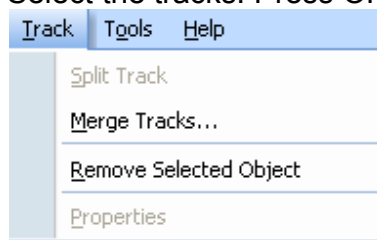

Save and Open Project

Menu command "File" -> "Save project" will save the tracks and photo as a project file.

Menu command "File" -> "Open project…" will open the saved project. The project, photos, and photo comments will be restored after the project opened.

Time Zone Setting and Daylight Saving Time

There are two time zone settings in "GPS Photo Tagger". One is "Photo time zone", the other is "Display time zone". "Photo time zone" is set to the same time zone of your digital camera. The "Display time zone" is set for displaying purpose. For example, If you are an Englishman and you travel to United State. The "Photo time zone" should be set to "England" because your digital camera time zone is in England, and the display time zone should be set to "United State".

The "Photo time zone" by default is set to the PC default value. In most of the case the default value is correct.

Menu command "Tools" -> "Options" will invoke the options dialog. You can set "Photo Time Zone" in the dialog.

The "display time zone" setting is in the status bar. If it is daylight saving time, please check the checkbox "Daylight Saving Time".
Options

Menu command "Tools" > "Options…"

Distance unit:

    Metric: Kilometer / meters will be used for displaying.

    Imperial: Miles / feet will be used for displaying.

Lat/Long:

    Degrees, minutes, seconds: Latitude and longitude will be display like 23°12'20"

    Degrees: Latitude and longitude will be display like 23.22152°

Photo Time Zone:

    The time zone of your digital camera time setting

Max photo/track diff time:

The setting is used to match photo and track waypoints. Photo Tagger will match photos and waypoints by time. It will find the nearest waypoint time to locate the photo. Yet, if the closest waypoint time is more than the "Max photo/track diff time", it will not match the photo.

Group Photos when distance is less than:

When two photos' distance is less than the setting, these two photos will be put in the same place mark.

Photo size in KMZ:

The size of the photos packed in the KMZ file. It is related to the command "File" > "Export As KMZ…"

Preferred Language:

Set the languages for menu, buttons and messages.

System Requirement

Minimum System Requirement:

- Windows XP

- Pentium III, 1000 Mhz

- 256MB RAM

- 128 MB disk space

- Network speed: 256 Kbits/sec

- 800x600, "16-bit High color" screen.

Recommended System Requirement

- Windows XP or Vista

- Pentium IV, 2.4GHz above

- 512MB RAM

- 2G Bytes free disk space

- Network speed: 768 Kbits/sec

- 1280x1024, "32-bit True Color" screen.
